

Variable

Module-scoped and shared variables
from E3SM Fortran source

α
 dz
 dt
 $temp_k$
 $flux_{out}$
 ρ_{air}
 vcl_x

System

E3SM root node
top-level model system entry point

$$T_v = T (1 + 0.61 q)$$

$$\Phi = \int g dz$$

$$R_i = \frac{g \Delta \theta z}{\theta U^2}$$

$$F_r = \frac{U}{\sqrt{gh}}$$

$$Avg_{flux} = (\sum_{i=1}^n flux_i) / n$$

Equation

Extracted symbolic relations
Connects variables to governing physics
